Web FormSafe

Hits: 759

Description: Web FormSafe will allow you to stop worrying about PGP or other complex email encryption systems when it comes to collecting sensitive form data from your website. FormSafe works by taking form submissions right from a website, and immediately encrypting the information collected and then storing that encrypted data in a database. You are sent a regular email alerting you to the new form submission for your account, with a link to take you to the login area to retrieve the information.

Resource Specifications

Version:	1.1
