xTree

Hits: 1,483

Description: xTree is an Active Server component that mimics a tree structure, like the explorer in WIN95 or NT. It expands and collapses depending on user interaction and generates pure HTML. The information that is to be presented can either be loaded from file or added dynamically. Tree members can be either of folder- or item-type. A tree can contain many folders and each folder can contain many items. This version support nested folders. The component was built for use with Microsoft IIS and ASP.

Resource Specifications

Version:	2.01
Platform(s):	Windows NT
Price:	Free evaluation/\$49
