DESTech Store

Hits: 1,094

Description: DESTech Store is a storefront creator/manager that utilizes Active Server Pages and either mySQL (using myODBC Version 3.51) or Microsoft Access for database backing. Cart and checkout are performed via PayPal integration.

This storefront and admin section has been tested with the latest versions of Internet Explorer, Netscape Navigator and Opera. EASY setup, flexibility and price make this a clear choice for small business. If you don't have a homepage, this program can generate one for you from the database. Options are included for left, right and center panes. Modifying headers and footers make sweeping storefront changes a snap. Individual shipping charges can be added per product and passed on to paypal! Edit home page layout and product details using embedded HTML editor. Its as simple as using a word processor. (Required you use Internet Explorer 5.5 or above...all other browsers will see normal text environment instead of html editor).

Resource Specifications

Version:	1
Platform(s):	WEB Server supporting ASP 3.0
