Database Software

Hits: 19,862

Description: PHPMagic is a program that helps you develop web database applications rapidly. Just define your database, set some options, click the Generate button, and ... that's it! You do not need to have any programming background to use it. PHPMagic creates a full setup script to create the mysql tables and the forms that interface with them. You will then have an exceptional web database application ready for uploading to your website. It has all the powerful features you would expect from a professional database application: data navigation, sorting, searching, advanced filtering, modification, addition, deletion and File Uploads.

Resource Specifications

Version:	3.1
Platform(s):	linux, windows
