Formsess

Hits: 4,867

Description: A Smarty powered forms framework.

Adds support for a XHTML compliant set of tags, directly inspired from standard form tags, and allows you to skip most common steps implied in forms manipulation:

- validation (javascript & server side)
- data persistence (any validated field is automatically kept)

Resource Specifications

Version:	pre-2.0.0
Platform(s):	All
Price:	Open source - LGPL

Formsess is extremely useful and encourages good design habits. Follow this framework's example and you'll have clean, concise form code that fits perfectly into your Smarty templates. Even without much knowledge of Smarty, implementing forms with Formsess + Smarty should be manageable.

Documentation could be better, but it's still under development and features are more important than examples and instructions! Glad to add this tool to our arsenal!
