Description: A suite of applets displaying scrolling flag and pennant effects. This, the demo version can be configured to display a message or advertisement in text on the body of the flag.

The result, even in this cut-down version can be most striking and is easily implemented via the passing of the text as an applet parameter from the html. The full licensed version comes with source and full parameter customisation whereby logos, fabrics, text sizing and colour can be mixed and matched in the presentation of entire scrolling manifests for the advertising of ideas and products.

Resource Specifications

Version:	jdk 1.1
Platform(s):	all
Price:	free to try/£10 to buy
