Petition

Hits: 2,869

Description: New! Allow your web visitors to sign a petition with their real signature. Need real signatures? No problem! This script makes use of a free Java drawing applet allowing your signees to scribble their John Hancock with a mouse! How cool is that?

This Perl script makes use of a free Java applet which captures signatures as a series of numbers. You allow users to sign your petition or document with the signature.pl script, and you may view the signatures later with with view_petition.pl script.

New!

Now you can let your visitors view the petition, without concern for privacy. Unless you include the password, the view_petition script will only display the name and the signature.

Also added in the last release is the ability to specify the number of signatures per page, and 'next' or 'last' buttons at the bottom depending on whether there are more signatures to view. Also you may request email addresses with this latest release.

Download Petition now, and let me know what you think!

Resource Specifications

Version:	50108
Platform(s):	linux, windows, freebsd, osx, sun
Price:	\$14.95
Date Added:	Aug 11th, 2003
Last Updated:	Apr 21st, 2005
Author:	Jason Silver

Average Visitor Rating:  **4.50** (out of 5)
Number of Ratings: 4 Votes

Average Member Rating:  **0.00** (out of 5)
