Automatic Mailing List

Hits: 3,466

Description: Automatic Mailing List will allow people to automatically subscribe and unsubscribe their e-mail address from your mailing list simply by sending you an e-mail. This CGI connects to any POP3 Mail account, checks each message for subscribe/unsubscribe requests, and then edits your mailing list e-mail file accordingly. The best part about using this system is that any e-mail that bounces back (after you send out a newsletter) can be automatically removed, making it easier to maintain a quality mailing list. Use AML to enhance an existing mailing list script, or see it do a great job by itself! Why pay money for other mailing list software that can't do what this script can?

Resource Specifications
