Minotaur - a layer 2 trace route for cisco switches Hits: 4,318

Description: Minotaur is a simple layer 2 traceroute program written in PHP. The script is desgined to work with almost all kinds of Cisco switches with CDP (Cisco Discovery Protocol) turned on and TACACS+ login turned on. The script will take an IP or MAC address you are looking for and traverse through the switch network. There is an option for a seed device as well.
