SHOP MASTER

Hits: 2,506

Description: SHOPMASTER is the SITEMASTER shopping cart!

It is made to be easy integrated in the website of any SITEMASTER client. It could be installed on your server also - please read bellow.

This Shopping Cart goes free with any SITEMASTER account.

This Shopping Cart is fully functional with no limits for number of categories and sub-levels of categories for products and number of products as well.

It is made INTUITIVE to use - after few click in the DEMO you should know how it works- add category or two, products, options for products , make a purchase, manage orders, or manage e-mails to see that SHOPMASTER posseses the word INTUITIVE.

However if you have ANY question , please feel free to ask it [HERE](#) or send us E-mail at tefter@tefter.com. You will recieve answer in 24 hours time.

This shopping cart is set to use 2checkout.com as credit card processor.

The payment happens from a page which uses your shop Header and Footer so the buyer do not see any changes After successfull card charging to buyer is brought back to your thank you page.

To accept cc payments you should register your own account at

>>> www.2checkout.com <<< We strongly recommned them

because they are very reliable, flexible , they charge only one time \$49 Setup Fee ,\$.45 per ,Transaction 5.5% of Transaction Amount. They simply make life easier!

HOWEVER if you already have cc proccessor of your own we could set your shopping cart to work with your proccessor - for one time fee ot USD 95.00 .

IF YOU ALREADY HAVE A WEBSITE .

OPTION 1.

Simply register through SITEMASTER new website www.yoursitename_onlineshop.com and add only the SHOPMASTER . Frame one page of your site with your HEADER and FOOTER and the MIDDLE frame name "main" .All SHOPMASTER links are set with base target "main". This will cost your 9.95 USD per month- our regular fee .

OPTION 2. Ask us to install SHOPMASTER on your server . We will need 72 hours ftp access to a dir withing your cgi-bin dir. We will make the header and footer using your website content and following your specific instructions.

We would ask for this job one time fee of USD 395.00 .

If your server doesnt support the GD module of Perl (this module makes possible to make thumbnails of the images and to resize the full images) - we would ask additional USD 95.00 fee to set the program work without it. In this case you you will need to make two images for every product by hand with Image Authoring Tool - thumbnail and big one.

The value of SHOPMASTER comes from it's simplicity to use by shopper and admin combined with full functionality. The program is made only with two files - for shopping and for administering - so simple. It is made after a long time predecision and comparing with any available shopping cart on the net.

It is a hard job to seek the best Shopping Cart . Please bookmark this page, in case if you get lost at some moment in the seeking and need to find us again.
