ASP/PHP Web Application Builder

Hits: 2,660

Description: Builds sophisticated, secure ASP/PHP Web Database Apps without programming, but unlike many wizards, it does not sacrifice flexibility for advanced users/programmers. With these applications you can add/search/edit/delete data in your web database. Data Entry forms have full validation, prevent alpha characters being entered in numeric fields, has a calendar for dates, and can lookup relational data in other tables.

Resource Specifications

Version:	6.05
Platform(s):	Windows 98/ME/NT/XP/2000
