TotalCalendar

Hits: 86,004

Description: TotalCalendar is the complete solution for all of your calendar needs. TotalCalendar gives you the ability to create multiple calendars (each with it's own unique qualities) and allows you to easily share and manage your events online. - Multiple calendar support - Multiple database types support (not just MySQL) - Event categories - Improved views (month view, day view, and year view) - Easily change each calendar's layout, themes, language, date format, time format, first day of the calendar week, etc... - Template system to allow you to create and share different calendar layouts - Background images can be used in the calendar month - Download events in both iCal and vCal formats - "Subscribe" to the calendar using client-side calendar applications such as Mozilla Calendar, Sunbird, and Macintosh iCalendar to synchronize with the online calendar.

- Stream information such as Upcoming Events in and RSS feed to share.

good program but, Jul 7th, 2004

Reviewed By: rfelps04

i think it is a good program and I would have rated it good, but on their web site they have rigged their rating form to only return an excellent rating. a nasty trick. they should be very embarrassed by this behavior.

Even better than the 1st version, Sep 10th, 2003

Reviewed By: tekelsonrize

This new version has been much improved. The entire coding has been redone with style sheets for easy complete customization. Everything seems cleaned up from the previous version. The installation is simple as well. If you are already using the first version, you can just upload the new one right on top. You don't lose any of your events or mysql data! Job well done.

Great Update, Sep 11th, 2003

Reviewed By: mgdgreco

As an owner of the first version of TotalCalendar, I am very impressed with the newer version. Sweetphp.com seems to really be concerned with what their customers want. I love the new ability to fully customize the calendar through style sheets!

Untrustworthy!, Nov 26th, 2004

Reviewed By: cosmo_craze

The services provided by this company is very poor. Their conducts are very untrustworthy. This is evident from the fact that they rigged their own rating system to return "Excellent", no matter what is chosen.

These guys are obviously not interested in any real feedback.

Reviews for TotalCalendar

V1.5 was very nice, V2.2 is awesome!, Jul 7th, 2005

Reviewed By: rcc

Version 2.2 has exactly what I need for my website. It allows several users to add data, and produce truly easy to read results, and allows visitors to quickly target on what they want. Installation and upgrades were very easy. Each time I had a question (I needed some hand holding) the author was VERY quick about answering questions, even on evenings and weekends.

TotalCalendar rocks!, Dec 22nd, 2006

Reviewed By: it@communityprep.org

Totalcalendar is a pleasure to work with. It is very customizable and offers great tools within the online calendar. I installed it and modified it in a few hours for our school and the staff was extatic. I am not an experienced php programmer and the instructions were not enough to have me complete the installation, but once I got some help from my ISP and from SweetPHP I was there! The response from SweetPHP is very good and prompt. Defintely well worth the \$35. And better than anything else!
