MindForum

Hits: 3,529

Description: Mindforum is a web BBS software. It's very fast even when there are thousands of message in a message board, because it uses (and requires) a mySQL server to store messages. Main features include: Full cookies support so that users do not have to enter their name and e-mail address everytime the post a message and know which messages are new and which he/she already read, Full support for message threading, Many message list display formats, All the display configuration is made directly in the message list page, Easy to intall and configure, Protected against duplicate submissions, E-mail digest of the forum, and Fast full-text (author, author e-mail, subject, body) case insensitive message search engine.

Resource Specifications

Version:	1.0.1
