AngelineCMS

Hits: 11,223

Description: AngelineCMS is a new GPL/LGPL'ed CMS, I started it out just for fun, and for being tired of bloatware like PHPNuke. Its pretty light and small, but does it's job. Rapid development, please join & test & send feedback! Some features: Blogger, Image gallery, Article manager, File manager with subdirectory support, Links, i.e whole site can be managed via web interface. 0.4 is already quite mature release! Please give it a shot!

Resource Specifications

Version:	0.4
Platform(s):	Linux, Unix
Price:	GPL
