My PHP - Calendar

Hits: 29,152

Description: This calendar gives the user the control to watch a specific month + year.

Control the layout with some variables with makes it easy to edit the calendar for your site.

This scripts uses the date() function from PHP to calc some useable info. February 2000 and 2004 are giving a leap year.

A fine, small and complete script!

this rocks, Dec 5th, 2004

Reviewed By: trapez

A mini calendar with php file that rocks. this is a simple one php file that you can build on, exactly what I was looking for. The code is clean, easy to follow. It turn out I may not even build on this, check out v2.21.
