ASP 101: Shopping Cart

Hits: 16,841

Description: This ASP sample code will store a users product choices, calculate a quick total and pass the results to an e-mail, text file, or whatever other data source you feel like attaching it to. It is made to be fairly easy to add on to by keeping a lot of the code in self contained functions. You also don't need to use this to list your products. Simply call it to add and delete items and to check out. This sample does not do the actual order handling.

Resource Specifications

Price:	Free
