Pretty simple to setup. Took about 15 minutes to install. Powerful enough for what I needed without all the extras I did not need.

**I use that script and I LOVE it!**, Aug 31st, 2001

I must admit that it took some time for me to get it adapted to my needs and ideas: I wanted to create a special interest directory for cycling pages. But although I was absolutely new to PHP I got it up and running.

Just today I realized that Google even knows all my category pages as the first hit via a search for the name of one of my categories was logged. There is the constant discussion about "do they know about dynamically generated pages?"- In the case of phphoo2 Google at least knows!

I thought this might be interesting for some of you looking around.
