Description: Ever wonder where SPAMMERS get your email address even though you don't add it to mailing lists? Believe it or not, there is software designed to work much like a normal "spider", except that they harvest email address to be sold. phpAK will currently block/log approximately 100 User Agents known to be malicious. These include email harvestors, and site rippers. As more UA's are developed, we intend to add them to new releases of phpAK. Currently phpAK will log to a MySQL database, and send you an email notification of User Agent activity it is designed to monitor.

Resource Specifications	
Version:	1.1
Platform(s):	Linux, Unix
Price:	\$5.00
