jsGuard: JavaScript protection system. Hits: 1,247

Description: The JSGuard protection system encode JavaScript source code and does not allow to download source code from the server. It is not 100% safe but actual time to hack the system is very close to script development time. The system works on IE and NS platforms. We did not test it on others. If you are interesting in using this protection system or have questions and suggestions please do not hesitate to contact us.

Resource Specifications

Version:	Pilot
Platform(s):	NS, IE
Price:	n/a
