idreams mailer (professional form processing)

Hits: 9,705

Description: This formmailer can do whatever you want! You can create new form actions, which allows you to do all sort of forms (9 formular tempates included). You can edit mail templates, html templates, work with multiple attachements and gzip folder packing, even allow to attach files. What's more there is a mail database and a standard newsletter function. You can also check if the mail entered is valid via checkcodes, do ip/email banning. You've got the possibility to store and sort and work with pre-defined files,.... Security is ensured by captchas (image verification) and hidden security codes.

Just try it out!

Resource Specifications
