## My PHP - FileUpload (one directory)

Hits: 11,145

**Description:** Simple FileUpload is a small script that gives the user to be able to upload and download in one map with an username and password.

Very handy for a group of users who want to share some files for i.e. school projects. That was the reason this script is written.

Style is editable via a stylesheet and very simple to install.

**!Attention!** The directory you share has to have read and write rights!

### Resource Specifications
