AJLogin Ultra-Lite

Hits: 3,327

Description: This is a bare minimum ASP page protector.

There is one password to protect unlimited secure pages.

It is intended to protect admin pages that are only supposed to be viewed by the webmaster.

Written in ASP and Javascript; compact, clean code - no DB, password stored in config file.

The login page remembers the page the user was attempting to view when they were redirected, and sends them back to that page in the event of a successful login.
