Link Tracker

Hits: 1,019

Description: Link Tracker is a professional link tracking system designed to give you control of your links both on and off your website. See who is sending you traffic and see who is clicking on your links! All you need to do is create a link in the admin area of the program and then use the special link it generates for you. This link will then keep track of how many times it is clicked and it will also keep a log of time, IP and referring page where the link was clicked from. This works great for when you pay for advertising on someone else's webpage. Now you can see how many clicks you get for your money!

Resource Specifications

Version:	1.0
Platform(s):	Unix/NT
