BugHotel Reservation System

Hits: 18,749

Description: BugHotel is a full-featured online booking system to an existing or new website with no technical expertise required. It allows end users, travel agents and booking agents to log on to your website and enter real-time reservations. In addition, BugHotel Reservation System will automatically check and charge deposits on credit cards without any hotel staff intervention. You control how many rooms are available through your website, all without losing those rooms from your general availability.

Reviews for BugHotel Reservation System

Horrible, Apr 12th, 2008

Reviewed By: datawebcorp

The demo site looks great and pre-sales support was helpful. But after spending \$600, opening 80+ support tickets, and wasting nearly a full year to get it working reliably, I had to abandon this s/w and buy something else. This product literally has SO MANY bugs that is was UNUSABLE. We never got to go live with it! The product does seem to be evolving and improving, but I had no success with the code I bought. Luckily there are other choices when it comes to reservation s/w.

I have a quite opposite review of datawebcorp. I ordered the travel edition system and it works very good. Support was very helpful and I was able to have my travel site up and running quite fast with all features I requested. They helped me all the way and we have a very feature reach and working travel site very quickly:
