SabaBrowse

Hits: 2,077

Description: SABABrowse is a Web application that allows browsing and editing databases with an Internet browser.

It runs on application servers (WebLogic, Websphere, Jboss, Tomcat etc ...) and needs no installation on the client side.

You just have to deploy the application on your server, setup a few parameters and you can immediatly access your DBMS with an Internet browser. In a second time and if required you will be able to customize SABABrowse.
