Flyspeck - Browser Based Editing

Hits: 1,352

Description: Flyspeck lets your clients edit their web pages themselves while still allowing you the control you need over the templates. Flyspeck lets non-technical users update a portion of a web page, sometimes more than one portion, without any installed software.

Works on any static web page, HTML, SHTML, HTM, or PHP no database needed!

The only web-page editing system that allows your users to browse as they ordinarily do and choose to edit.

Image Upload and select from your /images dir
Document Upload!

Multiple editable chunks in one page (so they don't wreck your layout) including <head> section!

Fully Translated for International Use

Password protection by directory, or just one for the whole site.

Feature Rich Editor with Clean Paste from Word, Advanced Table Controls and more!

Resource Specifications
