MySQL Version is a waste of time, Oct 21st, 2004

- * Must be installed in webroot (no relative paths)
- * Gives DB errors when pages contain anything other than a-z 0-9 (i.e. not smart enough to handle HTML, quotes, exclamation marks etc)
- * MySQL version is VERY buggy
- * The interface is very simplistic - apart from changing colors and fonts, any other changes are not possible, and the customizable content area is limited to around 500px square box.
