Quick Count

Hits: 4,346

Description: Another counter Perl script, yet this one is quick and not seen by your visitor. Hidden within an image url, this script stays behind the scenes counting your visitors. Running the script direct displays all the stats for the page counters along with showing the Total, Most and Least days and each day graphed. Stats are kept by total number since day started and tracked for the number of days you desire. As new days are added, older ones are removed only storing the number of days you set.
