# Applet Builder Collection

Hits: 3,687

**Description:** Applet builder is designed to help you make navigation menus for your Web site without any Java or HTML experience. You can use colored or image backgrounds; put icons in your applets; use any color for text, borders, or backgrounds; make mouseover effects; use sounds on mouse events; control border widths; and view the HTML code as you are creating applets. The applets work in frames and tables easily. The previewer allows you to see the applet as you create. You can easily test your applets in a browser while you are creating them.

New added: Slide Menu Builder & Tree Icon Menu Builder.

Resource Specifications	
<b>Version:</b>	3.2
<b>Platform(s):</b>	linux, windows
