Emaze ScriptWizard

Hits: 3,149

Description: ScriptWizard is a Perl-based system for creating scripts to process forms and surveys. Great functionality, but it requires some Perl knowledge to really take advantage of it. The webmaster or site administrator is given the ability to add new usernames, and revoke old ones. ScriptWizard allows you to have multiple users and even tracks which forms and survey have been used by each user. After logging into ScriptWizard, you choose which form or survey you would like to create a script to process. There are four choices: An existing form or survey created by you, An existing form or survey created by someone else using that copy of ScriptWizard, A form or survey template provided by Emaze Software, and A new form or survey.
