Master Snooper

Hits: 2,868

Description: Master Snooper is an easy to install, easy to maintain CGI program written with Perl 5 to let you see the real code behind web pages. Have you typed in one URL and ended up somewhere else? Use Master Snooper to see the HTML source code they used to send you on your merry way. Ever wonder what the HTML code of a framed website looks like? Use Master Snooper to see it all. Does your browser's "view source" results only show some of the JavaScript and other code a web page uses? Use Master Snooper to see what's really there.

Cool scripts., Sep 24th, 2001

Reviewed By: Special_UAE

Excellent scripts to see pages sources. They didn't give the option of how to limit the file extension, like their demo, but it is a very cool script.
