ZBase

Hits: 6,206

Description: ZBase is an object framework (set of classes) written in PHP4 allowing to develop the www frontend of a database very quickly and simply. In ZBase, each entry in the database can be considered as an object, and ZBase provides standard methods to modify or display its content. ZBase is aimed at experienced web site developers, not at the low-end user. You won't have this web interface working in less than five minutes.
