Website Contact Form Generator

Hits: 20,094

Description: This free utility enables you to create form-to-email scripts for your ASP, PHP or Perl web site with no programming skills needed.

Simply choose the options and field names for your contact form, then download the HTML for the contact form, and the ASP, PHP or PERL response script, that are instantly created for you.

For me, a novice when it comes to scripting, this website did exactly what I needed it to. Enter in a few fields for your form, pick your script language (ASP in my case) and it builds the code to insert into your pages. If you know nothing about creating email forms, this is the code for you.
