Javadoc2Help

Hits: 1,938

Description: Javadoc2Help is a java based tool for converting the javadoc generated html output into Java Help, HTML Help(CHM) and Oracle Help For Java(OHJ) format.

Javadoc2Help will generate the necessary support map, toc, helpset, etc for Java Help, HTML Help and Oracle Help for Java. If Microsoft HTML Help workshop is installed and the CHM compiler path is provided in bin/javadoc2help.properties, a CHM file is also created automatically in the specified destination directory.
