This is a totally customisable script that everyone who needs web forms processed should get. I would highly recommend this script. The help desk/support centre are extremely efficient, fast and wonderful. If you have any queries, don't hesitate to contact them! Even if you are completely new to web design/development, this script is still for you. Don't be afraid!!

**Work very well, great script !**, Jul 5th, 2005

This is better than good script. If you can do basic web site, you can use this script. If you have problems, you can contact helpdesk and they are ready to help you even VERY FAST. I think this is the best script to create multiple page forms and forms where you can calculate values and much more. This is HIGHLY RECOMMENDED!!

**Form Processor Pro - Wonderful Product**, Jul 5th, 2005

I purchased Form Processor Pro for my website that has 12 different forms with different input fields. I wanted the form responses to be sent to more than one email address as well as be sent to the customer who filled out the form. I also wanted the forms to be logged. This was all possible with Form Processor Pro. There are many more features that are available with this product. Not only is the product great but the support was as well. I received timely and informational responses to every question I asked. I'm not a php programmer so when things were a little over my head, they helped me out and got everything up and running. I can't think of one negative thing to say about this product. I had reviewed and tried other products before and this was the only one that met all of my needs.

This is one great piece of software. With the different ways you can set it up and the ease of it all, everyone should be using this one. I love the way you can create preview pages and format your emails any way you want. Two thumbs up to you guys at Email-Form.com.

Also, support for this product is actually pretty good compared to others I've used.

Good job Dan and the rest of the crew.
