Advanced Istaller for Java

Hits: 1,032

Description: Advanced Installer For Java 1.6 is a Windows Installer authoring tool with built-in support for Java applications, integrating them fully into the Windows OS and making them look and feel just like a native application. Advanced Installer for Java runs on Windows 2000/XP, and the install packages it creates run on all Microsoft Windows 9x/ME/NT/2k/XP operating systems. Using the standard Windows Installer technology, Advanced Installer For Java is able to provide the best Windows integration for your Java applications.
