ASP.NET Menu 3.0

Hits: 2,327

Description: ASP.NET DHTML Menu is a component (Server Control) for ASP.NET. It generates hierarchical DHTML menu for web sites. The component is based on XML and CSS. The generated HTML and client JavaScript is compatible with all popular browsers. ASP.NET DHTML Menu is a flexible, reliable, powerful and easy to use product. No HTML, JavaScript or special knowledge required. The Menu Structure is defined through XML and can be obtained from a static file or programmatically. Supports unicode. Also, there is a large number of ready-to-use menu styles. With ASP.NET DHTML Menu you can add a DHTML menu to your web site within a few minutes.
