Upload Files & Directories via WebDAV For Sharepoint

Hits: 2,205

Description: This script was written for Sharepoint Portal Server 2003, but will work with ANY WebDAV storage system.

It has 2 functions: one for a single file upload and the other for a recursive directory upload. For the directory, please be sure to specify the "baseUrl" constant as it is needed outside of the function call.

This is pretty self explanatory, but if you have any questions e-mail me.
