Talk Post

Hits: 2,331

Description: Talk Post is a Free PHP communication script to let your visitors quickly post what's on their mind .Visitors will be able to enter their name, location and email address as well as smilies and html code which you can choose to display or turn off all in a compact cPanel page.

Bad word list can be chosen to filter through the posted messages so that you can keep things in order. Timestamp user messages with a custom date.

Add or delete smilie icons by editing a text file that is on the server. Uses 1 flat text data file for processing and just 5 other files not including smilies.

Features in the cPanel will not work on firefox netscape browsers.
