CGIMachine - FORMVAR

Hits: 2,787

Description: CGIMachine - FORMVAR is a reliable and secure application for sending the contents of your online-forms (e.g. orderform or contactform) to any email-account. All fields will be combined to one single email-message and send off. The client (who filled in the online-form) obtains any HTML-document you want as response. CGIMachine - FORMVAR has to be installed only once on your server for handling as many different online-forms as you want at one time. This allows the saving of processor time and server space.

Resource Specifications

Version:	1.61
