## Seagull Application Framework

Hits: 3,718

**Description:** Seagull is an OO PHP framework with the core modules licensed under BSD, and has the following design goals:

- independence of data, logic & presentation layers
- extensible component architecture
- reduction of repetitive programming tasks
- simplifying data access
- comprehensive error handling
- module workflow routines
- form handling without the donkey work
- component reuse
- authentication management
- integration with PEAR libraries
- PHP coding standards
- platform/PHP version/browser independence
- self-generating documentation
- quality end user docs

Great MVC/OO framework. PHP4&5 compatible, good template engine, database independence, I18N support and still lightweight (beside bundled Pear libraries). It stands out of the crowd.

I made an e-commerce site using only the core (no CMS needed). It is very flexible and uses search engine friendly URLs. It is mature and suited to production use. Actively developed by lot of good coders.

The doc. is complete, the code is clear and reusable and the mailing list is helpful. Good choice! Try it.
