# Simple Download Counter

Hits: 9,070

**Description:** This is a small and efficient download counter. It only requires one 2KB file in order to run. Requires only one small 2 column database table. Just link to download.php?file=filename and the script will automatically add the file to the database if its not already in there and begin counting downloads. Has hack protection to prevent people from trying to get files in other folders. Super easy to use and setup!

## Resource Specifications

## Reviews for Simple Download Counter

**It works mostly**, Oct 14th, 2005

Reviewed By: maxieduncan

It is a pretty simple script and works fairly well. The only problem that I had with it was when I tried to download a file that had a space in the name. The script didn't appear to be able to handle it.
