## Bizzar IP Redirection

Hits: 4,233

**Description:** This is perfect for an intranet (that's what I used it for, but it has many applications). This script is meant to redirect people to any website based on their local IP address. It works by identifying the 4 parts of an ip address, assigning them to a variable, and allows you to put if/then statements against those variables. You can also do ranges in the event you have a block of ip addresses that you want to redirect by.

### Resource Specifications

<b>Version:</b>	1.0
<b>Platform(s):</b>	linux, windows
<b>Price:</b>	GPL
<b>Date Added:</b>	Apr 28th, 2004
<b>Last Updated:</b>	May 30th, 2008
<b>Author:</b>	Brad Derstine ( aka Bizzar )
