Free JavaScript Event Calendar

Hits: 17,955

Description: This FREE Javascript event calendar tool lets you put an attractive and dynamic event calendar on your web site with optional hyperlinks to more detailed information and image inclusion to add visual appeal.

Unlike most other web calendar tools, it requires no CGI or server-side scripting or database capabilities on the server and it still works with older (pre-CSS) browsers. This is an enhanced version of a calendar script created by Kevin Ilsen and is compatible with any event definitions you have created for use with his script.

You can assign events to categories and your visitors can selectively hide or display entire categories of events. Category formats can be assigned globally, so that each category can have its own format such as color, but you can override formatting for individual events. You can add messages in the empty space that usually occurs at the beginning and end of most months. And you can allow your visitors to switch to a printer-friendly view and to download the events displayed in a format suitable for importing into MS Outlook and from there into PDA's. With the appropriate external JavaScript functions, you can also automatically add holidays and corresponding dates in an alternate calendar system (Hebrew, Moslem, etc.).

[Free JavaScript Event Calendar](#)

Review of Free JavaScript Event Calendar, Aug 9th, 2004

Reviewed By: jxh

This script is based on Kevin Ilsen's excellent calendar scripts, and he deserves special mention for creating them.

Rick Pike has added some excellent functionality. I found the scripts easy to use and they are well documented. Rick also provides quick and helpful support by email. An understanding of JavaScript is needed to take full advantage of the script's potential.

I can whole-heartedly recommend this script and recommend you try it out for yourself. You won't regret it.

Nice!, Nov 30th, 2004

Reviewed By: lisamwise

This is a great set of scripts. I agree tha a good understanding of JavaScript is needed to take full advantage of the script's potential. There are many customizations you can make. I used Kevin's version previously, and it was great, but Rick made it even better. I definately recommend it, but if you don't know javascript, you may have some problems configuring since the directions aren't very clear.

Good program, Apr 22nd, 2005

I looked at 3 other event calendars. This was the smallest and does the job. The others seem bloated and wanted \$50 bucks at least.

Excellent Calendar!, Oct 18th, 2007

I was looking On Line for a Free web based calendar...it took some time but I found the right one!

I was building a site for my Taekwondo Instructor, and I thought that the "Event Calendar would be the most visited page, therefore it needed to function, look, and feel like a real calendar.

Honestly though I think there could be a little better instruction on how to implement into your own pages.

Other than that it is a great Calendar! I definitely will be looking for future versions!

Fantastic Calendar, Jan 3rd, 2008

Reviewed By: bobcrawford

This calendar was not only easy to get up and running, it was pretty simple to customize it the way I wanted. I was able to embed it into my blog much easier than some other scripts I tried before this one. The response from my website visitors has been great... Thanks!!!
