phpBB forum archiver for Search Engines

Hits: 2,537

Description: Thank you for choosing our free ScriptWiz.com phpBB HTML Archiver Installation. We use this on our sites for more search engine friendly URL's and to make member HTML pages. This script does not alter or touch your database or phpBB files. Instead it uses a mod_rewrite command found on UNIX servers.

The way this script works is quite nice. It is really an intelligent, dynamic wrapper for your forum. It lists all contents from your database such as forums, threads, and members on SEF (search engine friendly) pages. It also shows the particular content when calling the SEF URL. In simple terms, it pulls all the forum data to create SEF hyperlinks so google and other search engines can easily go through your entire forum as the search engine will see it as static html pages being created every day! There is nothing better than fresh content.

There are other very good archive scripts out there but we felt the need to create this script for the following reasons:

- We feel it produces more SEF links both in quality and quantity
- The script requires the more standard mod_rewrite
- This script is very small in size
- This script creates SEF page for each member of your forum
- This script does not touch any of the phpBB files or database

Resource Specifications

Version:	1.0
