WinNc.Net

Hits: 877

Description: WinNc.Net is a file manager for Windows XP and 2000/ME/98/95 that replaces the use of the existing Windows Explorer. Developed by a small Dutch multimedia company called Dunes MultiMedia, WinNc uses the same key shortcuts and the same mouse functionality as a well-known DOS file manager. Lots of tool buttons and menu items provide access to standard file-management methods. You can e.g. easily format, copy, move, delete, view, and edit files.
