TotalLinker

Hits: 5,582

Description: TotalLinker v1.0 is an online link management and submission application for your website. This script allows different members and/or visitors to add their links to categories that you or selected members create. It features multiple layouts of link displays as well as many different configuration options to allow you to easily fit it to your needs. The link administrator has full control of all options in the script and it's functions. The script uses MySQL for a great, professional and dynamic database system. The TotalLinker system also features customizable style sheets to allow you to easily fit it in with the rest of your site.
