My-PHP Shoutbox

Hits: 6,012

Description: "A small guestbook at the right side of your page..."

As simple shoutbox that works without a MySQL database and uses only a flat text file as database.

Easily include the file into your webpage and call the function show_shoutbox() and the shoutbox will be there :)

Scroll without frames in a box where the shouts are.

The layout: height, width, border, font-face and size can be changed by passing them via the function. Just read the Readme.txt for the right info.
