# AnyURL

Hits: 1,801

**Description:** AnyURL is a CGI form processing program which provides a trivial way for HTML authors to use CGI forms input to point to URL's without doing any programming. This avoids the need to write a different program for each form (or group of forms), while still being flexible enough to point to URL's containing different access methods, nodes, and object types.

## Resource Specifications

<b>Version:</b>	1.5
<b>Platform(s):</b>	Unix
<b>Price:</b>	Free
<b>Date Added:</b>	Jan 12th, 2000
<b>Last Updated:</b>	Jan 12th, 2000
