Strip Dir

Hits: 5,591

Description: Strip Dir is a useful PHP based tool that allows you to 'strip' the images out of an Open Directory (Open Dir), Image Board, or any website. All you have to do is enter the URL of the page that you want to strip and click Strip!

But the best thing is that you can download all images in once! When you've stripped a page you can select several (or all) images and Strip Dir will generate a ZIP file for you to download, containing the images you've selected! It's can't be any easier!

New since version 3.1, Strip Dir can follow links on pages. Strip Dir will search the page for links to other pages that contain images and Strip them automatically!
